

03/2003 06-04-02-1 FT

Application

Remarks

A mechanical stop must protect the load cell against "static" overloads. The ajustment of this stop must leave a gap at least equal to the load cell's deflection under full load. The load cell must also be protected by shock absorbers against shocks, dynamic overlaods or vibrations.

Mechanical installation

On metal foot

The force to be measured must be applied on the axis of the load point, without gap, inclination or torsion.

Application

- Scales.
- Tankscales, hopperscales.

Presentation

riesentatio

General information

The CMI load cell consists od a stainless steel strain member and is hermetically sealed by laser welded stainless steel cups.

It has been designed for used in industrial environments with an aggressive atmosphere, such as the chemical industry. CMI load cells have been test certificate for 3 000d. Meating the IP 68 standard, CMI load cells are compact and available in four capacities: 500, 1 000, 2 000 and 5 000 kg.

Special mounting parts to adapt the load cell to its mechanical environment are available as an option.

Description

The working principle of the CMI load cell is to measure the deformation of a beam subjected to shear stress. The strain gauges are arranged to form a Wheatstone bridge, converting the mechanical force exerted on the load cell into an electrical signal.

Conformity

Test certificate Nr. SDM 00.07 according to R60 of the OIML.

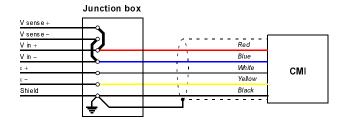

⊕ Option

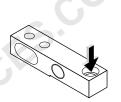

Ex version for use in explosive and according to new directive 94/09/ CE. EEx ia IIC T6.

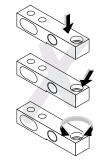

CE type certificate Nr : LCIE 02 ATEX 6083 X

Wiring

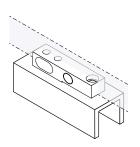

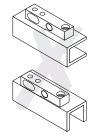

Right mounting

Right mounting

On a metal supporting structure

The load cell must be fitted on the axis of the structure.

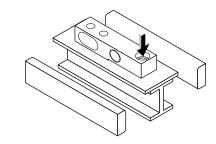

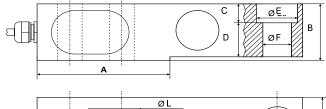

Right mounting

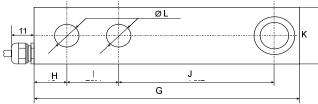

Right mounting

The supporting structure must be so stiff that it does not bend under the weight of the load. Reinforcement of the structure may in some cases be necessary.

Dimensions

CMI		500	1000	2000	5000

Electrical characteristics

Maximum excitation voltage ac or dc	12 V
■ Input impedance	420 Ω ± 10%
Output impedance	351 Ω ± 2 Ω
insulation resistance	> 5 000 M Ω
■ Sensitivity	2 mV/V ± 0.1%
■ Non-repeatability	< 0.005%
■ Temperature effect on sensitivity	< 0.0009 % / °C
Temperature effect on zero balance	< 0.0014 % / °C
Shielded cable, in black PVC jacket	
• O.D	4.8 mm
 Length 	
CMI 500, 1000, 2000	
CMI 5000	
Max. bending radius	20 mm

Environment

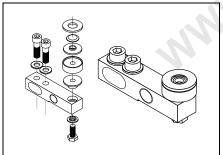

-	i emperature range	
	 Recommended 	

	Without alteration	
•	Storage	- 25 °C / + 80 °C
•	Protection according to EN 60-529	IP 68

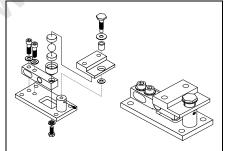

Options*

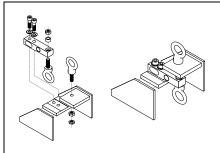

Hopper mounting - Shock absorber

Standard marking

Fabriqué en 200X

Ex version making

^{*} Arrangement may vary with each model.
